The **koala** (*Phascolarctos cinereus* or, inaccurately, **koala bear**) is an arboreal herbivorous marsupial native to Australia. It is the only extant representative of the family Phascolarctidae, and its closest living relatives are the wombats.<sup>[3]</sup> The koala is found in coastal areas of the mainland's eastern and southern regions, inhabiting Queensland, New South Wales, Victoria and South Australia. It is easily recognisable by its stout, tailless body; round, fluffy ears; and large, spoon-shaped nose. The koala has a body length of 60–85 cm and weighs 4–15 kg. [04/10 => Sportvergadering van 14u-17u] Pelage colour ranges from silver grey to chocolate brown. Koalas from the northern populations are typically smaller and lighter in colour than their counterparts further south. It is possible that these populations are separate subspecies, but this is disputed.

Koalas typically inhabit open eucalypt woodlands, and the leaves of these trees make up most of their diet. Because this eucalypt diet has limited nutritional and caloric content, koalas are largely sedentary and sleep for up to 20 hours a day. They are asocial animals, and bonding exists only between mothers and dependent offspring. Adult males communicate with loud bellows that intimidate rivals and attract mates. Males mark their presence with secretions from scent glands located on their chests. Being marsupials, koalas give birth [11/10 => Pijlsetterkestoct van 14u tot 17u] to underdeveloped young that crawl into their mothers' pouches, where they stay for the first six to seven months of their life. These young koalas are known as joeys, and are fully weaned at around a year. Koalas have few natural predators and parasites but are threatened by various pathogens, like Chlamydiae bacteria and the koala retrovirus, as well as by bushfires and droughts.

Koalas were hunted by indigenous Australians and depicted in myths and cave art for millennia. The first recorded encounter between a European and a koala was in 1798, and an image of the animal was published in 1810 by naturalist George Perry. Popular artist John Gould illustrated and described the koala, introducing the species to the general British public. Further details about the animal's biology were revealed in the 19th century by several English scientists. Because of its distinctive appearance, the koala is recognised worldwide as a symbol of Australia. Koalas are listed as of [18/10 => Woudloperskeuken van 14u tot 17u] Least Concern by the International Union for Conservation of Nature. The Australian government lists populations in Queensland and New South Wales as Vulnerable. The animal was hunted heavily in the early 20th century for its fur, and large-scale cullings in Queensland resulted in a public outcry that initiated a movement to protect the species. Sanctuaries were established, and translocation efforts moved to new regions koalas whose habitat had become fragmented or reduced. The biggest threat to their existence is habitat destruction caused by agriculture and urbanisation.

The word koala comes from the Dharug gula. Although the vowel 'u' was originally written in the English orthography as "oo" (in spellings such as coola or koolah), it was changed to "oa", possibly in error. The word is mistakenly said to mean "doesn't drink". Because of the koala's resemblance to a bear, it was often miscalled the koala bear, particularly by early settlers. Other names like monkey bear, native bear, and tree-bear have also been used. Indigenous names include cullawine, koolawong, colah, karbor, colo [25/10 => Ruwe spelen van 14u tot 17u] , coolbun, boorabee, burroor, bangaroo, pucawan, banjarah, and burrenbong; many of these mean "no drink".

Groetjes van jullie leiding! Daan, Jean, Gilles en Lode

Lo scautismo (o scoutismo) è un movimento a carattere non partitico, aperto a tutti senza distinzione di origine, razza e fede religiosa, nato da un'idea di Sir Robert Baden-Powell, barone di Gilwell, dag jong-givertjes noto a tutti gli scout del als je benieuwd bent wat we deze maand gaan doen mondo come Baden-Powell o semplicemente B.P. Nel 1910 Baden-Powell fondò ufficialmente l'Associazione delle Girl Guides e il movimento parallelo del Guidismo. L'idea gli venne suggerita a un raduno scout nel 1909, dove sette ragazze sfilarono inaspettatamente sotto gli occhi di Baden-Powell autodefinendosi Girl Scouts.L'organizzazione di questo movimento venne in un primo tempo affidata alla sorella Agnes, ma in seguito zaterdag 18 oktober gaan we passò a sua moglie Olave.Origine del termine[modifica | modifica sorgente]La parola scout, che significa in lingua inglese ricognitore, esploratore, veniva e viene tuttora usata in ambito militare per woudloperskeuken doen van 10u tot 15u dus indicare tutti quei mezzi e quelle attività volte a localizzare il nemico. In Gran Bretagna venne mutato in "scout" nel 1966, nell'ambito di estese riforme. In altre nazioni (fra cui l'Italia) è caduto in disuso dagli anni 70 del XX secolo, cioè quando la maggior parte delle associazioni ha cominciato ad avere soci di entrambi i sessi (anche se con modalità diverse).
